CYBER INSURANCE

Insurers and Policyholders Face Challenges in an Evolving Market

Why GAO Did This Study
Malicious cyber activity poses significant risk to the federal government and the nation’s businesses and critical infrastructure, and it costs the U.S. billions of dollars each year. Threat actors are becoming increasingly capable of carrying out attacks, highlighting the need for a stable cyber insurance market.

The National Defense Authorization Act for Fiscal Year 2021 includes a provision for GAO to study the U.S. cyber insurance market. This report describes (1) key trends in the current market for cyber insurance, and (2) identified challenges faced by the cyber insurance market and options to address them.

To conduct this work, GAO analyzed industry data on cyber insurance policies; reviewed reports on cyber risk and cyber insurance from researchers, think tanks, and the insurance industry; and interviewed Treasury officials. GAO also interviewed two industry associations representing cyber insurance providers, an organization providing policy language services to insurers, and one large cyber insurance provider.

What GAO Found
Key trends in the current market for cyber insurance include the following:

- Increasing take-up. Data from a global insurance broker indicate its clients’ take-up rate (proportion of existing clients electing coverage) for cyber insurance rose from 20 percent in 2016 to 47 percent in 2020 (see figure).
- Price increases. Industry sources said higher prices have occurred with increased demand and higher insurer costs from more frequent and severe cyberattacks. In a recent survey of insurance brokers, more than half of respondents’ clients saw prices go up 10–30 percent in late 2020.
- Lower coverage limits. Industry representatives told GAO that the growing number of cyberattacks led insurers to reduce coverage limits for some industry sectors, such as healthcare and education.
- Cyber-specific policies. Insurers increasingly have offered policies specific to cyber risk, rather than including that risk in packages with other coverages. This shift reflects a desire for more clarity on what is covered and for higher cyber-specific coverage limits.

The cyber insurance industry faces multiple challenges; industry stakeholders have proposed options to help address these challenges:

- Limited historical data on losses. Without comprehensive, high-quality data on cyber losses, it can be difficult to estimate potential losses from cyberattacks and price policies accordingly. Some industry participants said federal and state governments and industry could collaborate to collect and share incident data to assess risk and develop cyber insurance products.
- Cyber policies lack common definitions. Industry stakeholders noted that differing definitions for policy terms, such as “cyberterrorism,” can lead to a lack of clarity on what is covered. They suggested that federal and state governments and the insurance industry could work collaboratively to advance common definitions.

GAO Work on Cyber Insurance

- Cyber insurance report published May 2021
  - Required by the National Defense Authorization Act
  - Studied the state and availability of cybersecurity insurance coverage

- Ongoing work on cyberterrorism insurance
  - Required by the 2020 Further Consolidated Appropriations Act
  - Examining cyber risks faced by U.S. critical infrastructure and the applicability of the Terrorism Risk Insurance Program to cyber events
Cyber Insurance Generally Available and Affordable

- Take-up rates generally rose from 26 percent in 2016 to 47 percent in 2020.

- Rising take-up rates suggest increasing demand for cyber insurance, willingness of insurers to offer it, and ability of policyholders to afford it.

- However, there is uncertainty over whether this trend will continue as risks increase and losses grow for insurers.
After holding relatively steady in 2017 and 2018, cyber insurance premiums increased markedly in 2020.

Other Indications of a Tightening Market

- Reduced coverage limits for certain sectors
- Tighter terms and more exclusions
- More cyber-specific policies
Challenges Facing Cyber Insurance

- Limited historical data
  - Limited, incomplete, or poor data on cyber losses makes it difficult to build predictive models and properly price policies.

- Lack of common definitions
  - Industry representatives and reports note that terms such as “cyberattack,” “cyberwar,” and “cyberterrorism” do not have consistent definitions.

- Questions about applicability of TRIA
  - Uncertainty over whether cyberattacks likely to meet TRIA’s certification criteria.
